

## PREPOSITIONAL ENTRIES IN ENGLISH-POLISH DICTIONARIES<sup>1</sup>

ARLETA ADAMSKA-SAŁACIAK

*Adam Mickiewicz University, Poznań*

### ABSTRACT

The present paper examines the microstructure of entries devoted to prepositions in bilingual English-Polish dictionaries. Given the problems inherent in the lexicographic treatment of function words, it seems worthwhile to ask:

- what are the strategies employed in cases of lack of interlingual equivalence?
- what is the preferred type of sense-structure (i.e. source-language based, target-language based or mixed)?
- does the entry highlight links between related senses?
- how much phraseology is deemed necessary to present the properties of the preposition in question?
- how does the choice of entry organisation affect its usefulness and user-friendliness?
- what possible improvements could be introduced?

Answers to the above questions are believed to have implications for lexicography in general, not merely bilingual lexicography in the English-Polish context.

### 1. Prepositions as a problem area

As argued in detail in Adamska-Sałaciak (2008), prepositions constitute a major problem for lexicographers, grammarians, theoretical linguists, and foreign language learners. Due to their focus on so-called lexical words and their semantically-based microstructure, dictionaries may not be the best place for describing function words (Sinclair 1991: 81). Reference grammars do not fare much better, since, as admitted, e.g., by Quirk and Greenbaum (1973: 143), “it

---

<sup>1</sup> A draft of this paper was presented at *The 13<sup>th</sup> Lexicographic Symposium in Copenhagen* (3-5 May 2007).

is difficult to describe prepositional meanings systematically". Theoretical linguists tend to agree: "the individual meanings of the prepositions overlap, creating a lexical nightmare for anyone trying to represent prepositional meaning on the basis of semantic contrast and a syntactic nightmare for anyone trying to characterize their occurrence on the basis of lexical meaning or grammatical category alone" (Rice 1992: 90). As if this were not enough, foreign learners have to cope with the fact that different languages conceptualise space in different ways, so that even seemingly equivalent prepositions cease to act as such in contexts other than those involving the most basic spatial configurations. There are also, as is well known, differences at the level of grammatical structure, so that, for example, relations which in one language are expressed by prepositions in another one may be coded by case inflection. All this makes reliance on the native language a poor guide to mastering the behaviour of prepositions in a foreign language.

## 2. Prepositional polysemy and monolingual dictionaries

There exist small-scale studies of the presentation of prepositions in monolingual dictionaries of English, especially in learners' dictionaries (henceforth MLDs). Swanepoel (1998) notes that prepositions are normally presented in dictionaries as long lists of consecutively numbered senses, which creates the impression that those senses are completely arbitrary and must therefore be learnt by heart.<sup>2</sup> In a recent monograph on the semantics of English prepositions, Tyler and Evans (2003) have called this "the homonymy position". The name is of little importance, for the approach is indistinguishable in practice from what could be dubbed "unrestricted/unconstrained polysemy", a policy most conspicuous in period dictionaries. *DOE* is a prime example, presenting the prepositions *for* and *from* as having more than 100 senses each (Healey 2002: 139).<sup>3</sup> Whatever label we attach to the approach in question, there is little doubt that adopting it makes it difficult to show that the various senses of a prepositional headword may be related.

Coffey (2006) examines the pedagogical usefulness of the treatment of function words (including the prepositions *at*, *by*, *for*, *from*, *in*, *of*, *on*, *to*, *with*) in "the big five".<sup>4</sup> He claims that, from the point of view of the advanced learner,

---

<sup>2</sup> In addition to two MLDs (*Collins Cobuild English Language Dictionary* and *Longman Dictionary of Contemporary English*, editions not specified) Swanepoel examined also *The Concise Oxford Dictionary*, which suggests that his observations may be valid for monolingual English dictionaries in general.

<sup>3</sup> See the "Dictionaries" section of the references for full data behind all such abbreviations.

<sup>4</sup> *Cambridge Advanced Learner's Dictionary* (2003), *Collins Cobuild English Dictionary for Advanced Learners* (2003), *Longman Dictionary of Contemporary English* (2003), *Macmillan*

detailed polysemic analysis is superfluous, as is information on the basic uses, which such learners are unlikely ever to look up. He suggests that MLD entries devoted to function words should concentrate on the rarer and more difficult uses. Paradoxically, as Coffey is well aware, the redundancies he identifies spring from good lexicographic practice: the attempt to reflect state-of-the-art linguistic knowledge about the behaviour of a particular lexical item (gained, these days, primarily from studying large corpora), and the requirement that entries should be uniform across the dictionary.

When it comes to bilingual dictionaries, whose readership is not restricted to advanced learners, the second of Coffey's objections does not apply: information on the basic uses and/or senses of a headword is definitely needed there. As for very detailed treatment of (alleged) polysemy, things are less clear. On the one hand, the argument about likelihood of consultation is probably still valid: regardless of their proficiency level, foreign learners seem more likely to turn to entries for content words than to those for function words. On the other hand, one would like a large (academic) bilingual dictionary to incorporate linguists' findings about source language (henceforth SL) lexical items and, even more so, about their target language (henceforth TL) equivalents. But are both possible at the same time? And how does the preferred sense structure of a given dictionary affect the lexicographer's options in this respect? In the following, I want to address these and related questions by looking at and commenting on the treatment of English prepositions in bilingual English-Polish dictionaries.

### 3. Prepositions in English-Polish dictionaries

Three large English-Polish dictionaries have been examined here: *STAN*, *PWNO*, and *NKFD*. The first of these dates back to the mid-twentieth century, the remaining two are recent arrivals.<sup>5</sup> Twenty-nine prepositions have been chosen for scrutiny: *about*, *above*, *after*, *along*, *around*, *at*, *before*, *below*, *beside*, *between*, *by*, *down*, *for*, *from*, *in*, *into*, *of*, *off*, *on*, *onto*, *over*, *since*, *through*, *to*, *under*, *up*, *with*, *within*, and *without*.<sup>6</sup> Table 1 generalises over the results of the analysis which are presented in detail in Table 2 (Appendix I).

<sup>5</sup> *English Dictionary for Advanced Learners* (2002), and *Oxford Advanced Learner's Dictionary* (2005).

<sup>6</sup> See Adamska-Salaciak (2006: Chapter One) for a sketch of post-1945 English-Polish lexicography.

<sup>6</sup> It is debatable whether the analysis should include *of*. Synchronously, *of* is not primarily spatial (Langacker 1993: 12). Besides, its behaviour, compared with that of other prepositions, is highly untypical, which has led Sinclair (1991: 82) to the stipulation that *of* is best treated as a one-member word class. Still, given that *of* is the preposition most frequently encountered in corpora of English, leaving it out might be considered objectionable. The other primarily non-spatial prepositions in our list are *for* and *since*.

Table 1. Aspects of the presentation of prepositions in three English-Polish dictionaries

Dictionary	<i>STAN</i>	<i>PWNO</i>	<i>NKFD</i>
Metalanguage	TL	SL	TL
Sense structure	SL-base, but subsenses sometimes distinguished on a TL-basis ( <i>by, for, into, on</i> )	SL-based	predominantly TL-based (17 entries out of 29)
Sense-splitting based on different equivalents?	no	no	frequently
Sense-lumping based on identical equivalents?	no (exceptions: <i>before, through</i> )	no	yes
Criteria for sense ordering	when discernible at all, predominantly logical; occasionally historical ( <i>about, with</i> )	probably frequency, which sometimes agrees with the historical/logical criterion	mixed: sometimes logical, but usually the equivalent judged most frequent is given first
Spatial sense first where applicable?	yes	yes	yes
Special treatment of prepositions (functional rather than semantic)? <sup>7</sup>	TL sense discriminators, where present, tend to contain functional information.	SL sense discriminators (obligatory except when a new sense is introduced by a domain label) sometimes contain functional information.	TL discriminators and post-glosses, when present, tend to contain functional information.

<sup>7</sup> By functional information I mean guide phrases of the type: *indicating agent, cause; in promises, oaths*. Semantic information – on the whole, more usual in dictionary entries – features in guide phrases such as: *owing to, from, according to, from evidence of* (all examples taken from the *by* entry in *PWNO*).

Number of equivalents	moderate	small, sometimes no equivalents at all are given ( <i>at, down</i> )	large
Information on Polish constructions corresponding to English prepositional phrases?	yes	no	yes
Sense-network visible?	occasionally, through sense discriminators	mostly to English-speaking users, thanks to sense discriminators	sometimes through the equivalents themselves; occasionally thanks to post-glosses or the label <i>przen.</i> ‘fig’.
Amount of phraseology	entry-dependent, ranging from 1 ( <i>around, into</i> ) to 49 ( <i>to</i> ); mostly short, skeleton-type phrases, often listing options; usually fewer than 10 per entry (more than 20 in <i>by, for, from, in, of, on, to, under, with</i> )	numerous phrases in most entries: usually over 20, maximum 160 ( <i>for</i> ), sometimes listing options, often in the form of full sentences	entry-dependent, ranging from 2 ( <i>along, before, between</i> ) to 62 ( <i>at</i> ), sometimes listing options, occasionally in the form of full sentences
Location of phrasology	at appropriate sense	at appropriate sense, except for idioms (in a separate, entry-final section)	usually at appropriate sense; entry-final when none of the equivalents can be used in the translation of the phrase
Individualised treatment of particular prepositions?	yes	no	yes

The second row in the table, i.e. the notion of sense structure, requires some comment. According to Zgusta (1971: 300-301), the structure of the bilingual entry should always be based on the meaning of the SL item, regardless of the direction of the dictionary (L2-L1 or L1-L2) and of its possible functions (decoding or encoding). Additionally, “[t]he bigger the dictionary and the more thoroughly it intends to describe the source language, the more will the structure of the bilingual entry have to resemble that of a monolingual dictionary of the source language, even if it implies the repetition of the same equivalent in different senses of the entry-word, but with different examples and phraseology” (Zgusta 1971: 327). Svensén (1987 [1993]: 159), by contrast, is firmly in favour of TL-based structure, arguing that: “[t]he purpose of the arrangement in a bilingual dictionary is not to demonstrate the structure of meanings in the source language. Instead, it should further the main aim of the dictionary, namely to make possible translation from the source language into the target language”. Manley et al. (1988: 296) put it even more forcefully: “meaning structure is a relic from the monolingual dictionary and ... the more we can approach equivalence structure the closer we will get to the ideal form of the bilingual dictionary”. Elsewhere (Adamska-Sałaciak 2006: Chapter Two) I have also argued for the latter type of structure, but I would readily revise this opinion, should the benefits of SL-based structure outweigh its disadvantages in the case of function words.

### 3.1. Prepositional entries in *STAN*

Even a cursory look at Table 1 suffices to see that the treatment of prepositions in the three dictionaries differs considerably. *STAN*, on the whole, has SL-based sense structure, but occasionally TL-based structure is favoured within senses, i.e. for subsense division. In such cases, different equivalents realising the same SL meaning are introduced by letters of the alphabet. It is hard to see why the strategy is adopted in some entries (*by, for, into, on*), but not in others (e.g. *at, from*, where different equivalents are separated by semicolons). Where there are more Polish equivalents per one (SL-based) sense, they are normally presented as subsenses (e.g. *below*); thus, there is no equivalent-based splitting of senses. Nor is there lumping based on the identity of the TL equivalents, as testified by entries for highly polysemous prepositions, where the same equivalent is repeated in several senses. The only exceptions are cases where one Polish equivalent works for both the spatial and the temporal sense (*before, through*), which are conflated in one sense.

Some sense discriminators (regularly in the entries for *for, from, of, to; occasionally in those for on, with*) are briefer (without a difference in information content) than those in other entries (e.g. *kierunek* ‘direction’ rather than *na*

*oznaczenie kierunku* ‘indicating direction’). There seems to be no rule governing the choice of the wording, so this looks more like an inconsistency than a result of a conscious decision.

The metalinguistic information given sometimes concerns not the source language itself, but the nature of the SL-TL equivalence. In such cases (where no prepositional equivalent in Polish exists), the information is presented in the form of a gloss and resembles a grammatical rule rather than a sense discriminator, e.g. (in the entry for *in*): 6. *w określonych sposobu, miejsca i czasu wyraża się za pomocą polskiego narzędnika lub przysłówka* ‘in descriptions of manner, place or time is expressed in Polish by the instrumental case or by an adverb’. This is immediately followed by phrases-cum-translations illustrating the rule in question.

*STAN* individualises the treatment of particular prepositions. The entries for *off* and *over*, for instance, contain elements not present in other prepositional entries (see Table 2 in Appendix I). Likewise, the number of phrases varies considerably, with *at*, *by*, *for*, *from*, *in*, *of*, *on*, *to*, *under*, *with* being illustrated much more generously than the remaining prepositions. Significantly, the same entries show richer phraseology in *NKFD*.

### 3.2. Prepositional entries in *PWNO*

Like in *STAN*, the entry structure in *PWNO* is SL-based. No matter how many times the same equivalent needs to be repeated in different places in the entry, there is no lumping of senses.

On the whole, the entries in this dictionary are the longest and most elaborate. Thanks to its no-lumping policy and, even more so, to the obligatory sense discriminators – e.g. (in the entry for *around*): 1. *on all sides of* 2. *throughout* 3. *in the vicinity of, near* 4. *approximately at* 5. *in order to pass, bypass, avoid* 6. *to the other side of* – *PWNO* comes closer to showing the sense network of an item than either *STAN* or *NKFD*. Metaphorical extensions of senses are also more visible here than in the other two dictionaries, because the *PWNO* sense discriminators can be read as mini-definitions. Naturally, being given in the source language, these are directed primarily at the English-speaking users of the dictionary. It is doubtful whether showing the sense network of an L2 item – especially if it is a function word – in an L2-L1 dictionary with the help of sense discriminators worded in the user’s L2 can be of much assistance to them.

Placing the historically earliest (usually spatial) sense first – as sometimes happens – may also go some way towards elucidating sense relations, but that is true of all three dictionaries.

*PWNO* is systematically based on a so-called “universal” English framework, i.e. one meant as a point of departure for constructing bilingual dictionaries with English as the source and any other language as the target. This characteristic of the framework accounts, among other things, for the richness of phraseology – excessive from the point of view of a Polish user, because prepared for a user whose native language is not specified (see the entry for *for* in Appendix II). Inevitably, some clearly redundant phrases have been left in, e.g. (in the entry for *by*): *a film by Chabrol, a novel by Virginia Woolf*.<sup>8</sup> Only two entries in *PWNO* include fewer phrases than the corresponding entries in the other two dictionaries: *at* (*PWNO*: 48, *NKFD*: 63) and *under* (*PWNO*: 22, *STAN*: 29, *NKFD*: 31). In the remaining entries, the number of phrases given by *PWNO* is often four to five times greater than elsewhere.

One area where *PWNO* is more frugal than the other dictionaries is the provision of equivalents. As a rule, this dictionary offers few decontextualised equivalents, and sometimes none at all (*at, down*). This makes it necessary to read all the phrases – which are often complete sentences – until the user comes upon one that fits their (receptive or productive) needs. Users must thus make their own generalisations from the phrases-cum-translations provided if they want to know the Polish counterpart(s) of the English headwords.

Unlike *STAN* and *NKFD*, *PWNO* gives no explicit grammatical information concerning the English-Polish interface, for instance, that a prepositional phrase containing a particular English preposition corresponds to a Polish noun in a particular case (e.g. genitive in the case of *of*, instrumental in the case of *with*).<sup>9</sup> Again, the underlying reason is presumably the “universality” of the framework, and one of the results is the inductive task put before the user, who has to work out the rule from the copious examples/phrases provided.

The SL sense discriminators, even when functional in nature, are not always helpful to the user, either Polish- or English-speaking, unless that user is also a linguist. For instance, the discriminator in sense 13 of *of* simply says: *partitive*.

No doubt due to strict observance of the publishers’ guidelines, the *PWNO* treatment of prepositions is the most consistent throughout. By the same token, it is also the least flexible, disallowing any individualisation of entries.

---

<sup>8</sup> Not only do both phrases illustrate the same structure in English, but there is no difference in their Polish translations, either. *Chabrol* seems to have been inherited from the English-French Oxford-Hachette, the first in the series of Oxford bilingual dictionaries; cf. also the numerous mentions of France, French or Paris in the entry for *for* (Appendix II).

<sup>9</sup> The only exception I have been able to spot is in sense 5. of *to*, where the discriminator says: *used as dative*. It is debatable whether this is intended to inform the user about the case of the Polish equivalent (if so, why is no such information given in other entries?). It may well be a relic from historical dictionaries of English, such as *OED*, and as such remains completely obscure to the vast majority of users, whether Polish- or English-speaking.

### 3.3. Prepositional entries in *NKFD*

In contrast to the other two dictionaries, *NKFD* as a whole has TL-based sense structure, but in prepositional entries this policy is not employed consistently: twelve of them have SL-based structure, sixteen have TL-based structure, and one (*after*) is here classified as mixed. SL-based structure is, of course, only identifiable when more than one equivalent is given per sense; otherwise it may be indistinguishable from TL-based structure. Our results have to be interpreted with caution for another reason as well: strictly speaking, if the presence of more than one equivalent per sense were always to be treated as indicative of SL-based structure, the outcome would be closer to fifty-fifty. However, entries with very many senses (e.g. *off*, *over*) of which only one features a couple of equivalents have been classified as TL-based, since such was clearly their overall design. This is not to say that no inconsistencies can be spotted: prepositions starting with early letters of the alphabet (up to and including D) mostly have entries with SL-based structure, while in later letters TL-based structure predominates.

Sense-discriminators (in the target language), although often present, are not obligatory in *NKFD*, so the relationship between senses usually remains implicit and can only be reconstructed indirectly, through the equivalents. Occasionally, a TL post-gloss is given, e.g. (in the entry for *before*): *przed (w czasie l. przestrzeni* ‘in time or space’); sometimes the label *przen.* ‘fig.’ signals a metaphorical extension.

Like *STAN*, *NKFD* sometimes gives glosses which contain general rules regarding the grammatical structure which appears in the Polish translation of a given English preposition, e.g.: 7. *odpowiada przedrostkowi przez-* ‘corresponds to the prefix *przez-*’ (in the entry for *through*); 2. *odpowiada polskiemu narzędnikowi* ‘corresponds to the Polish instrumental’ (in the entry for *with*).

*NKFD* offers the largest number of decontextualised equivalents (often near-synonyms), e.g., as many as nine in the entry for *around* (by comparison, *STAN* has three, and *PWNO* has only one; additionally – although the *PWNO* entry contains twenty-eight phrases, as contrasted with *NKFD*’s three – *NKFD* has several equivalents, such as *dokoła*, *kolo*, *w pobliżu*, which *PWNO* does not include).

As for systematically showing the sense network of a preposition, none of the dictionaries is very successful, but *NKFD* probably fares worst. This is because the task appears to be irreconcilable with TL-based entry-structure. As we have seen, whenever *NKFD* manages to offer a glimpse of the relations between senses, it is thanks to the fact that there is a considerable degree of sense parallelism between the items in the two languages. All the same, the other two dictionaries, although employing SL-structure, do not do a much better job of enlightening the Polish users.

#### 4. Suggested improvements

Given that SL-based structure and the concomitant no-lumping policy lead to very long entries, which no ordinary user can reasonably be expected to read in their entirety, a simplification of entries (above all, shortening them) would seem in order. Even assuming that the entries found in our three dictionaries were meant mainly for linguists or highly advanced learners of English (which they are not), they could still benefit from shortening, because a lot of their content (including many of the phrases) is simply redundant, the same phenomenon being illustrated several times in different places.

The space thus freed up could be put to better use: instead of multiplying senses and giving dozens of verbal illustrations, we could first present a (more discursive) “profile” of a given preposition, similar to what might appear in a good pedagogical grammar of the L2, but written in the user’s L1. The profile would be constructed in accordance with the precepts of cognitive semantics, in particular, the “principled polysemy” approach (Tyler – Evans 2003). It would be followed by what is traditionally found in an entry, namely equivalents, set phrases, and examples of usage.

Additionally, notes could be included, pinpointing the functional differences between pairs of English prepositions (e.g. *over* as opposed to *above*), featuring information on the relevant interlingual contrasts, and formulating general grammatical correspondences (e.g., English *of* plus noun corresponds to Polish noun in the genitive). Both the entry-initial profile and the entry-final notes could be accompanied by schematic drawings, to assist users who favour the visual learning style.

In terms of the macrostructure, the dictionary treatment of a given preposition could well be combined with that of a corresponding adverb or particle. *PWNO* and *NKFD* occasionally do it (e.g., in their entries for *up*), but the solution is not employed systematically. It deserves to be, given that the meaning of a preposition like, say, *over* is obviously not unrelated to that of the adverb *over*, the particle *over*, or the prefix *over-*. By discussing a given concept in one place and showing how it is realised by different parts of speech, we avoid repeating the same information in different entries and at the same time take advantage of the opportunity to make the dictionary user aware of the semantic motivation of grammar.

Finally, we can see in Table 2 (Appendix I) how *NKFD* and, especially, *STAN*, vary their lexicographic description, regarding the type of grammatical and lexical information included, the form of discriminators, the inclusion of remarks about Polish grammar, and so on. In my view, an even greater flexibility of approach and individualisation of treatment would be welcome, even if it means sacrificing consistency of structure across entries. After all, the lexicog-

rapher's top priority should be to assist the dictionary user. Structuring all the entries for items of a given type in exactly the same way only makes sense in those cases where it does not compromise this obvious priority hierarchy.

All these proposals – placed against the theoretical backdrop of Cognitive Linguistics and extended to all types of dictionaries for foreign learners – are further discussed in detail in Adamska-Sałaciak (2008).

## APPENDIX I

Table 2. The treatment of prepositions in three English-Polish dictionaries

Preposition/ beginning of <i>OED</i> entry	<i>STAN</i>	<i>PWNO</i>	<i>NKFD</i>
<i>about</i>	SL-based; 5 senses; 7 equivalents; 6 phrases; frequency seems to matter (sense 3. o, wobec precedes senses 4. przy, and 5. u, w, which are more literal); microstructure: number, equivalent(s), [phrase(s) with translation(s)]; translation doesn't always contain equivalent; <i>STAN</i> 1. = <i>OED</i> 1.	SL-based; 9 senses; 1 equivalent; 33 phrases; 3 idioms; non-historical order ( <i>OED</i> 1. = <i>PWN</i> 9.); microstructure: number, discriminator(s), [equivalent], phrase(s) with translation(s); only decontextualised equivalents, e.g.: 9. GB (surrounding) wokół; final IDIOMS section with 3 idioms	SL-based; 5 senses; 10 equivalent; 12 phrases; microstructure: number, equivalent(s), phrase(s) with translation(s); translation doesn't always contain equivalent; <i>NKFD</i> 1. # <i>OED</i> 1.
<b>I. Position.</b> <b>1. a.</b> On the outside, on the outer surface of; on every side of, all round; around, surrounding			
<i>above</i>	SL-based; 2 senses ( <i>higher than</i> and <i>more than</i> ); 4 equivalents; 6 phrases; spatial sense first; metaphorical extension visible; microstructure: number, [discriminator], equivalent, phrase(s) with translation(s); translation doesn't always contain equivalent	SL-based; 11 senses; 8 equivalents; 22 phrases; spatial sense first; metaphorical extension visible; microstructure: number, discriminator, equivalent, [phrase(s) with translation(s)]; translation doesn't always contain equivalent; puzzling sense 10. (higher in pitch) ponad (czymś)	SL-based; 6 senses; 8 equivalents; 14 phrases; spatial sense first; metaphorical extension visible; microstructure: number, [equivalent(s)], phrase(s) with translation(s); translation doesn't always contain equivalent; in one case explanatory equivalent given first: <b>5.</b> poza zasięgiem ( <i>negatywnej oceny</i> ); ~ <b>suspicion/reproach</b> poza podejrzeniami/krytyką

Preposition/ beginning of <i>OED</i> entry	<i>STAN</i>	<i>PWNO</i>	<i>NKFD</i>
<i>after</i> <b>I.</b> Of place. <b>1. a.</b> With verbs of motion: Following, going, or coming in the rear of, behind	SL-based; 2 senses (1. po (kimś, czymś); za (kimś, czymś), i.e. 1. includes <i>OED</i> 1.); 3 equivalents; 6 phrases; more abstract sense (2. według) follows more concrete one; microstructure: number, equivalent(s), phrase(s) with translation(s); translation typically doesn't contain equivalent	SL-based (no lumping; P <i>po</i> ( <i>czymś</i> ) as the only equivalent in six senses); 16 senses; 4 equivalents; 47 phrases; microstructure: number, discriminator, [equivalent(s)], phrase(s) with translation(s); translation usually contains equivalent; temporal sense first; <i>PWNO</i> 1. # <i>OED</i> 1.	hybrid (TL-based predominates, e.g. <b>day</b> ~ <b>day</b> in 2., not 1., only because of the equivalent; SL-based in that P <i>po</i> twice - in 1. as equivalent denoting any kind of sequence in time, in 3. US (przy podawaniu czasu); also SL in 6., which gives two equivalents); 9 senses; 7 equivalents; 24 phrases; microstructure: number, [equivalent(s)], phrase(s) with translation(s); translation usually contains equivalent; temporal sense first; <i>NKFD</i> 1. # <i>OED</i> 1.
<i>along</i> <b>1.</b> Through the whole or entire length of; from end to end of... <b>2.</b> This passes imperceptibly into an indication of <i>direction</i> rather than <i>space traversed</i>	SL-based; 3 senses; 3 equivalents; 5 phrases; 2. contains two fixed phrases only: <i>w zwrotach</i> : ~ <b>with sb, sth...</b> ; ~ <b>with all that...</b> ; strange sense 3. <i>pot</i> przez (kogoś); <b>it's all ~ of him</b> to wszystko przez niego – at best, contextual modulation mistaken for lexicalised sense	SL-based; 3 senses; 1 equivalent; 11 phrases; microstructure: number, discriminator, [equivalent], phrase(s) with translation	TL-based; 4 senses; 4 equivalents; 2 phrases; microstructure: number, equivalent, [phrase with translation]; translation doesn't always contain equivalent; metaphorical link shown in: <b>3. po</b> ; ~ <b>the way</b> po drodze ( <i>t. przen.</i> = <i>w trakcie trwania czegoś</i> ); <i>NKFD</i> 1. = <i>OED</i> 1.

Preposition/ beginning of <i>OED</i> entry	<i>STAN</i>	<i>PWNO</i>	<i>NKFD</i>
<i>around</i> <b>1.</b> On or along the circuit: <b>a.</b> of position... <b>b.</b> of motion	sense structure could be either, but, judging by other entries, probably SL-based; 3 senses; 3 equivalent; 1 phrases; spatial first, then temporal, then spatial again (1. dokoła, 2 około (godziny) 3. po całym (kraju, okręgu, mieście itp.); microstructure: number, [discriminator], equivalents, [phrase with translation]; translation contains equivalent	SL-based; 7 senses; 1 equivalent; 28 phrases; microstructure: number, discriminator, [equivalent], phrases with translation(s); translation typically doesn't contain equivalent; more senses than <i>OED</i> , which has 4 (e.g. <i>PWNO</i> 7. Meas, Sewing <b>he is 90 cm</b> <b>around the chest</b> ma 90 cm w klatce piersiowej); spatial sense first; <i>PWNO</i> 1. = <i>OED</i> 1.	SL-based (1. wokoło, dokoła, naokoło... 3. koło; w pobliżu; niedaleko); 5 senses; 9 equivalents (but omits <i>wokół</i> ); 3 phrases; microstructure: number, equivalent(s), [phrase with translation]; translation doesn't always contain equivalent; spatial sense first; <i>NKFD</i> 1. = <i>OED</i> 1.
<i>at</i> <b>I.</b> Local position; answering the question <i>Where?</i> (passing into <i>Whereby?</i> <i>Whence?</i> <i>Whither?</i> )	SL-based; 6 senses; 10 equivalents; 14 phrases; microstructure: number, [discriminator], equivalents, phrases (listing) with translations; up to 4 non-interchangeable equivalents (separated by semicolons) in one sense; translation usually contains equivalent; fixed phrase mistaken for lexicalised sense: 6. <i>w stanie</i> (wojny, pokojу); ~ <b>war w stanie wojny</b> (unless <i>w stanie</i> is intended as an explanatory equivalent for any similar phrase, e.g. <i>at daggers drawn</i> )	SL-based; 5 senses; no equivalent; 48 phrases; 5 idioms; microstructure: number, discriminator, phrases with translations; semantic extension recoverable: 1. denoting place, 2. denoting motion, 3. denoting time or order, 4. denoting activity, state; 1. starts with (prototypical?) point-like landmarks: <b>at the university, at home, at sea</b>	TL-based; 9 senses (of which last two contain expressions for which none of the equivalents in 1.-7. would work); 7 equivalents; 62 phrases; microstructure: number, equivalent, phrases with translations; translation usually contains equivalent

Preposition/ beginning of <i>OED</i> entry	<i>STAN</i>	<i>PWNO</i>	<i>NKFD</i>
<i>before</i>  <b>I.</b> Of se- quence in space.  <b>1. a.</b> Of motion: In advance of, ahead of.	TL-based (if SL-based, there should be at least 2 senses: spatial and tem- poral); 1 sense; 1 equiva- lent; 6 phrases; transla- tion doesn't always con- tain equivalent	SL-based; 8 senses; 7 equivalents (same one <i>przed</i> in 5 senses, the other two: <i>wobec</i> , <i>w obecności</i> ); 36 phrases; microstructure: number, discriminator, [equiva- lents], phrases with trans- lations; temporal sense before spatial ( <i>PWNO</i> 1. # <i>OED</i> 1.), so probably frequency ordering	TL-based; 1 sense; 1 equivalent; 2 phrases (1 of which contains the equivalent); equivalent followed by gloss in brackets ( <i>w czasie l. przestrzeni</i> ) '(in time or space)'
<i>below</i>  <b>1. a.</b> Lower than, at a less elevation than	SL-based; 1 senses; 2 equivalents; 4 phrases; translation usually con- tains equivalent	SL-based; 6 senses; 3 equivalents ( <i>pod</i> , <i>poniżej</i> , <i>na południe od</i> ); 22 phrases; microstructure: number, discriminator, [equivalents], phrases with translations; 'under' sense first ( <i>PWNO</i> 1. = <i>OED</i> 1.)	TL-based; 2 senses; 2 equivalents; 4 phrases; microstructure: number, equivalent, phrases with translations; translation contains equivalent; <i>OED</i> 1. split into two senses ( <i>pod</i> , <i>poniżej</i> )
<i>beside</i>  <b>1. lit.</b> By the side of; <i>hence</i> , close to, hard by.	SL-based; 5 senses; 6 equivalents; 4 phrases (1 of which is the sole con- tents of 5., the others in 1., but their translations don't contain either of the two equivalents given in that sense)	SL-based; 4 senses; 5 equivalents ( <i>obok</i> , <i>kolo</i> , <i>przy</i> , <i>w porównaniu</i> , <i>wobec</i> ); 7 phrases; 1 idiom; microstructure: number, discriminator, [equivalents], phrases with translations; <i>PWNO</i> 1. = <i>OED</i> 1.; 'apart from' sense cross-referred to <i>besides</i>	SL-based; 3 senses; 5 equivalents (three in 1., two in 2.); 3 phrases; microstructure: number, equivalents (except 3., which contains only phrases with translations); 1. <i>obok</i> , <i>przy</i> , <i>w pobliżu</i> ; 2. <i>oprócz</i> , <i>poza</i> ; <i>NKFD</i> 1. = <i>OED</i> 1.
<i>between</i>  <b>1.</b> The proper word express- ing the local relation of a point to two other points in opposite directions from it	SL-based; 3 senses; 3 equivalents; 7 phrases (3 of which are the sole contents of 3.); mistaken location of: <b>I won't</b> <b>stand ~ them and no one</b> <b>can stand ~ us</b> - should be in 1. (między, po- między), not in 2. (od... do)	SL-based; 7 senses; 5 equivalents; 24 phrases; no lumping; microstruc- ture: number, discrimina- tor, equivalent(s), phrases with translations; <i>PWNO</i> 1. = <i>OED</i> 1.	SL-based; 3 senses; 4 equivalents (two in 1., two in 2.); 2 phrases (1 of them with two variants); microstructure: number, [equivalent(s)], phrase with translation; transla- tion doesn't always con- tain equivalent; <i>NKFD</i> 1. = <i>OED</i> 1.

Preposition/ beginning of <i>OED</i> entry	<i>STAN</i>	<i>PWNO</i>	<i>NKFD</i>
<i>by</i>	SL-based sense division, TL-based subsense division, e.g. 1. <i>w określach miejsca</i> : a) przy... b) nad... c) obok; 17 senses; 17 equivalents (but not one per sense!); 36 phrases; microstructure: number, [discriminator], equivalents (often in separate subsenses marked by letters of the alphabet and followed by bracketed examples of Polish noun complements), phrases with translations; phrases at appropriate sense, but: <b>(all)</b> ~ <b>oneself</b> in 1. ( <i>w określach miejsca</i> ), while <b>all</b> ~ <b>myself</b> in 6b. ( <i>przy określaniu źródła, narzędzia, sposobu wykonywania czynności tłumaczy się... b) przysłówkiem</i> ); elements of functional explanation in sense and subsense discriminators	SL-based; 18 senses; 7 equivalents; 84 phrases; no lumping; microstructure: number, discriminator, [equivalent], phrases with translations; ordering not historical ( <i>PWNO</i> 1. # <i>OED</i> 1.): 1. ( <i>indicating agent, cause</i> )	SL-based; 12 senses; 14 equivalents; 55 phrases; microstructure: number, [discriminator], [equivalents], [gloss], phrases with translations; functional discriminators: 2. <i>zw. po pass. przez (wprowadza wykonawcę czynności l. przyczynę zdarzenia)</i> ; 5. stanowi część okolicznika sposobu ( <i>tłumaczonego często przez narzędzi</i> ); some glosses functional: <i>koło (t. w nazwach miejscowości)</i> , others contain synonyms: <i>przez (via l. w kierunku)</i> or complements: <i>do (jakiegoś czasu, terminu)</i> ; <i>na (t. sztuki, setki, godziny)</i> ; <i>NKFD</i> 1. = <i>OED</i> 1.
<b>I. Of position in space</b>			
<b>1. a. At the side or edge of; in the vicinity of; near, close to, beside.</b>			

Preposition/ beginning of <i>OED</i> entry	<i>STAN</i>	<i>PWNO</i>	<i>NKFD</i>
<i>down</i> <b>1. a.</b> In a descending direction along, through, or into; from top to bottom of; from a higher to a lower part of.	SL-based; 4 senses; 5 equivalents; 5 phrases; microstructure: number, [discriminator(s)]; [equivalent(s)], [phrase(s) with translations]; translation contains one of the equivalents; 3. starts with: <i> tłumaczy się przez stosowanie narzędnika</i> ‘is translated with the help of an instrumental’	SL-based; 4 senses; no decontextualised equivalent; 14 phrases; microstructure: number, discriminator, phrases with translations; <i>PWNO</i> 1. = <i>OED</i> 1.	SL-based; 4 senses; 8 equivalents; 8 phrases (4 list several alternatives); microstructure: number, equivalents (except in 4., which consists entirely of figurative phrases), phrases with translations; translation usually contains one of the equivalents; metaphorical extension signalled by the label <i>przen.</i> at the beginning of 4., which includes: <b>a few years ~ the road/ line/pike and be/go ~ the drain/ toilet/ plughole/ tube(s); <i>NKFD</i> 1. = <i>OED</i> 1.</b>
<i>for</i> <b>1. Of place.</b> <b>a.</b> In front of	SL-based sense division, TL-based subsense division (see <i>by</i> ); 15 senses; 23 equivalents (same equivalent repeated in different senses); 34 phrases; microstructure: number, [discriminator], [equivalents (often in separate subsenses marked by letters of the alphabet)], phrases with translations; translation doesn’t always contain equivalent; discriminators different in form from those in earlier entries, eg. <i>kierunek</i> ‘direction’ rather than: <i>dla oznaczenia kierunku</i> ‘indicating direction’ etc.	SL-based; 29 senses; 5 equivalents ( <i>dla</i> repeated in 4 senses); 160 phrases; microstructure: number, discriminator, [equivalent(s)], phrases with translations; translation sometimes contains equivalent; some discriminators functional (e.g. <i>when introducing clauses, in explanations</i> ); <i>PWNO</i> 1. # <i>OED</i> 1.	TL-based; 21 senses; 20 equivalents (2 in some senses, none in others); 78 phrases; microstructure: number, [equivalent(s)], gloss specifying function, phrases with translations (except 21., which consists wholly of phrases with translations); translation contains equivalent; lumping; <i>NKFD</i> 1. # <i>OED</i> 1.

Preposition/ beginning of <i>OED</i> entry	<i>STAN</i>	<i>PWNO</i>	<i>NKFD</i>
<i>from</i> <b>1.</b> Denoting departure or moving away; governing a n. which indicates a point of departure or place whence motion takes place	SL-based; 13 senses; 4 equivalents ( <i>od</i> repeated in 7 senses); 26 phrases; microstructure: number, discriminator, [equivalents], phrases with translations; translation doesn't always contain equivalent; same form of discriminators as in <i>for</i>	SL-based; 11 senses; 7 equivalent; 68 phrases (often listing options); microstructure: number, discriminator, [equivalent(s)], phrases with translations; translation sometimes contains equivalent; some discriminators functional (e.g. <i>indicating giver, sender, author, expressing extent range</i> ); sometimes guide phrases also disambiguate polysemous phrases, e.g. <b>from the station to the castle</b> (starting inside the station) ze stacji do zamku; (starting outside the station) od stacji do zamku; <i>PWNO</i> 1. includes <i>OED</i> 1. and combines several <i>OED</i> senses: 1. <i>indicating place, origin, direction</i> , which is unusually synthetic for this dictionary)	TL-based; 3 senses; 2 equivalents; 43 phrases; microstructure: number, equivalent, gloss specifying function, phrases with translations (except 3., whose microstructure is: number, TL discriminator – <i>z innymi przyimkami</i> ‘with other prepositions’ – phrases with translations; translation contains equivalent; <i>NKFD</i> 1. # <i>OED</i> 1.

<i>of</i>  <b>I.</b> Of motion, direction, distance.  <b>1. a.</b> Indicat- ing the thing, place, or direction from which something goes, comes, or is driven or moved: from, away from, out of. Now regional exc. as <i>off</i>	SL-based; 16 senses; 4 equivalents ( <i>z</i> repeated in six senses); 36 phrases; microstructure: number, discriminator, [equivalent(s)], phrases with translations; translation doesn't always contain equivalent; most discriminators short and functional in form; no mention of Polish genitive; <i>STAN</i> 1. ( <i>rozdzielenie, oddalenie, poz- bawienie, uwolnienie</i> ‘separation, distance, deprivation, release’) # <i>OED</i> 1.; phrases (the only ones) in 1.: <i>destitute of, free of, north of us, wide of</i>	SL-based; 16 senses; 1 equivalent (in 2 phonological variants: <i>z</i> and <i>ze</i> , repeated in 3 senses); 49 phrases; microstructure: number, discriminator, [equivalent], phrases with translations, translation doesn't always contain equivalent; most discriminators short and functional in form, e.g. <i>possession, belonging</i> , rather than <i>indicating possession, belonging</i> ; no mention of Polish genitive; <i>PWNO</i> 1. ( <i>origin</i> ) # <i>OED</i> 1.	TL-based; 8 senses (8. consists of phrases); 6 equivalents; 43 phrases; microstructure: number, [discriminator], [equivalent], phrases with translations; translation contains equivalent in 2.-7.; 1. starts with (the only) discriminator: <i>odpowiada dopełniaczowi lub przy- dawce w.j. polskim</i> ‘corresponds to the genitive or the attribute in Polish’; <i>NKFD</i> 1. # <i>OED</i> 1.
<i>off</i>  <b>I.</b> Of motion or direction.  <b>1. a.</b> Of removal from a position on, attached to, or in contact with (any- thing): away from, down from, up from, so as no longer to lie, rest, or lean on	SL-based; 9 senses; 8 equivalents; 7 phrases; microstructure: number, [examples of verb(s) or adjective(s) in TL], [domain label], equivalent(s), [phrases with translations]; translation doesn't always contain equivalent; unique element in this entry (and that for <i>over</i> ): sense-initial verbs or adjectives showing the context where a particular equivalent appears, e.g. 1. ( <i>spaść, odpaść, odejść, zdążyć itd.</i> ) <i>z &lt;od&gt;</i> ( <i>cze- goś, kogoś</i> ); <i>STAN</i> 1. = <i>OED</i> 1.	SL-based; 10 senses; 1 equivalent; 25 phrases; microstructure: number, [discriminator], [equivalent], phrases with translations, translation doesn't contain equivalent; all discriminators semantic; <i>PWNO</i> 1. ( <i>from the surface or top of</i> ) included in <i>OED</i> 1.	TL-based; 6 senses (6. consists of phrases); 5 equivalents; 21 phrases; microstructure: number, [equivalent(s)], phrases with translations; translation doesn't always contain equivalent; element of SL-structure: in 1. the equivalents are <i>od</i> and <i>z</i> <i>dala od</i> , yet the phrase <i>keep of the grass</i> is also included, although neither equivalent features in its translation; <i>NKFD</i> 1. # <i>OED</i> 1.

Preposition/ beginning of <i>OED</i> entry	<i>STAN</i>	<i>PWNO</i>	<i>NKFD</i>
<i>on</i> <b>I.</b> Of position. <b>1. a.</b> Above and in contact with; at rest on the upper surface of; above and supported by	SL-based sense structure, TL-based subsense structure; 13 senses; 9 equivalents ( <i>na</i> repeated in 4 senses); 25 phrases; microstructure: number, discriminator or domain label, [equivalent(s)], phrases (listing options) with translations; translation doesn't always contain equivalent; <i>STAN</i> 1. includes <i>OED</i> 1.; equivalents sometimes in separate subsenses marked by letters of the alphabet; most discriminators functional, short or long, sometimes giving a general rule of translation into Polish (e.g. tłumaczy się przez polski dopełniacz ‘is translated by Polish genitive’: <b>on that day</b> tego dnia)	SL-based; 20 senses; 5 equivalents ( <i>na</i> in 4 senses); 91 phrases; microstructure: number, discriminator or domain label, [equivalent(s)], phrases (listing options) with translations; translation doesn't always contain equivalent; 9 discriminators functional, some of them short: 1. (position), 17. (repeated events), others fuller: 2. (indicating attachment), 18. (in scoring)	TL-based; 8 senses (8. consists of phrases); 8 equivalents (but not one per sense); 58 phrases; microstructure: number, [equivalent(s)], phrases (listing options) with translations; translation usually contains equivalent; SL-based structure in 4., where 2 equivalents are given
<i>onto</i> <b>I.</b> Indicating motion to a position on.	No entry	1 senses; 2 equivalents; 2 phrases; 4 idioms; microstructure: discriminator, equivalent (one after the other, separated by semi-colon and discriminator), phrases with translations; translation contains equivalent; entry-final IDIOMS section	TL-based; 3 senses (3. consists of phrases); 2 equivalents; 10 phrases; microstructure: number, [equivalent], [gloss specifying function], phrases with translations; translation doesn't always contain equivalent; <i>NKFD</i> 1. = <i>OED</i> 1.

Preposition/ beginning of <i>OED</i> entry	<i>STAN</i>	<i>PWNO</i>	<i>NKFD</i>
<i>over</i> <b>I.</b> In sense 'above'. <b>1. a.</b> Above, higher up than	SL-based; 9 senses; 17 equivalent; 4 phrases; microstructure: number, [discriminator or exam- ple(s) of verb(s) in TL], equivalent(s), [noun complement(s)], [phrases with translations]; trans- lation usually contains equivalent; in some senses microstructure like in <i>off</i> , i.e. examples of Polish verbs given first; <i>STAN</i> 1. # <i>OED</i> 1.	SL-based; 13 senses (plus separate section II for the phrase <i>over and above</i> ); 3 equivalents ( <i>ponad</i> in 2 senses); 46 phrases; microstructure: number, discriminator or domain label, [equivalent(s)], phrases with translations; translation doesn't al- ways contain equivalent; <i>PWNO</i> 1 ( <i>across the top of</i> ) # <i>OED</i> 1.	SL-based; 13 senses (13. consists of phrases); 16 equivalents ( <i>przez</i> in 2 senses, spatial and tempo- ral); 33 phrases; micro- structure: number, [equivalent(s)], phrases with translations; transla- tion usually contains equivalent; <i>NKFD</i> 1. = <i>OED</i> 1.
<i>since</i> <b>1.</b> Ever or continuously from (a specified time, etc.) till now	1 sense; 1 equivalent; 3 phrases; microstructure: equivalent, gloss specify- ing use, phrases with translations; translation usually contains equiva- lent	1 sense; 1 equivalent; 7 phrases; microstructure: equivalent, phrases with translation; translation contains equivalent	1 sense; 1 equivalent; 3 phrases; microstructure: equivalent, phrases with translation; translation usually contains equiva- lent
<i>through</i> <b>1. a.</b> From one end, side, or surface to the other or opposite end, side, or sur- face of (a body or a space) by passing within it	SL-based; 7 senses; 9 equivalents ( <i>przez</i> re- peated in 2 senses); 17 phrases; microstructure: number, equivalent(s), phrases with translations, [noun complements in SL]; translation contains equivalent; <i>STAN</i> 1. # <i>OED</i> 1. (1. combines spatial and temporal sense: <i>przez</i> (w przestr- zeni i w czasie) 'przez' (in space and time)')	SL-based; 8 senses; 1 equivalent (repeated in 3 senses); 50 phrases; microstructure: number, discriminator, [equiva- lent], phrases with trans- lations, [noun comple- ments in SL]; translation doesn't always contain equivalent; sometimes more than 1 translation per phrase, depending on different SL subjects (given in brackets before respective translations); 1 discriminator functional; <i>PWNO</i> 1. = <i>OED</i> 1.	SL-based; 7 senses; 8 equivalents; 15 phrases (5 of them in 7., untranslated and cross-referred to verbal entries, e.g. <b>get ~ sth</b> ; discriminator specify- ing that <i>through</i> corre- sponds to a Polish prefix); microstructure: number, [discriminator], [equiva- lent(s)], phrases with translations; translation contains equivalent; <i>NKFD</i> 1. = <i>OED</i> 1.

Preposition/ beginning of <i>OED</i> entry	<i>STAN</i>	<i>PWNO</i>	<i>NKFD</i>
<i>to</i> <b>I.</b> Expressing a spatial or local relation.  <b>1.</b> Expressing motion directed towards and reaching: governing a n. denoting the place, thing, or person approached and reached	SL-based; 17 senses; 17 equivalents (but not one per sense); 49 phrases; microstructure: number, [discriminator], [equivalent(s)], [noun complements in TL], phrases with translations; translation doesn't always contain equivalent; discriminators functional, mostly short (e.g. <i>bliskość</i> 'closeness'), sometimes discursive, especially when giving suggestions for translating, e.g.: <i>tlumaczy się przez przymeł do z równoczesnym stosowaniem rzeczownika odsłownego zamiast angielskiego bezokolicznika</i> 'is translated by the preposition <i>do</i> with the simultaneous use of the gerund instead of the English infinitive'; <i>STAN</i> 1. = <i>OED</i> 1.	entry divided into infinitive particle (I) and preposition (II), with the former containing 7 senses; only the latter considered here: SL-based; 16 senses; 3 equivalents ( <i>do</i> repeated in 4 senses); 46 phrases; microstructure: number, discriminator, [equivalent(s)], [gloss containing noun complements in SL], phrases with translations; translation doesn't always contain equivalent; 10 discriminators semantic, 6 functional, unusual reference to case in 5. (used as dative); phrases in the form of dialogue: <b>give the letter to her</b> – <b>'to who?'</b> – <b>'her over there!'</b> ; richness of collocational info in SL, e.g.: 15. (on to) [ <i>tied, pinned</i> ] do ( <i>czegoś</i> ) [ <i>noticeboard, lapel</i> ]; <i>PWNO</i> 1. = <i>OED</i> 1.	TL-based; 13 senses; 8 equivalents; 45 phrases; microstructure: number, [discriminator], [equivalent], phrases with translations; translation contains equivalent; discriminators functional, giving either circumstances of use: <i>przy podawaniu czasu</i> 'when giving the time', or a grammatical function of <i>to</i> : <i>z czasownikiem tworzy bezokolicznik</i> 'with verb forms the infinitive', or a grammatical rule governing the translation of <i>to</i> into Polish: <i>odpowiada polskiemu celownikowi</i> 'corresponds to the Polish dative'

Preposition/ beginning of <i>OED</i> entry	<i>STAN</i>	<i>PWNO</i>	<i>NKFD</i>
<i>under</i> <b>I.</b> In senses denoting position beneath or below something, so as to have it above or overhead, or to be covered by it.	SL-based; 7 senses; 13 equivalent ( <i>pod</i> and <i>pode</i> repeated in 2 senses); 29 phrases; microstructure: number, [discriminator], [equivalent(s)], phrases with translations; translation doesn't always contain equivalent; discriminators functional; some equivalents given as options, unlike in other entries: 3. <i>pod wpływem &lt; ciężarem, działaniem &gt; (sth czegoś)</i> ; <i>STAN</i> 1. = <i>OED</i> 1.	SL-based; 8 senses; 5 equivalents ( <i>pod</i> repeated in 3 senses); 22 phrases; microstructure: number, discriminator or domain label, [equivalent(s)], phrases with translations; translation doesn't always contain equivalent; sometimes discriminators divide subsenses: 1. (beneath) (location) <i>pod (czymś)</i> ; (movement) <i>pod (coś)</i> ; 1 discriminator functional; <i>PWNO</i> 1. includes <i>OED</i> 1.	SL-based; 8 senses (8. consists of phrases); 11 equivalent; 31 phrases; microstructure: number, [domain label], [equivalent(s)], phrases with translations, [noun complement(s) in TL or disambiguating gloss]; translation contains equivalent; sometimes more than one translation per phrase, determined by different TL verbs (given in brackets after respective translation); <i>NKFD</i> 1. = <i>OED</i> 1. (spatial sense first, agrees with historically earliest)
<i>up</i> <b>I.</b> Denoting or implying movement. <b>1. a.</b> From a lower to a higher point on or along (an ascent); so as to ascend or mount (a stair, slope, etc.).	SL-based; 3 senses; 5 equivalents; 8 phrases; microstructure: number, discriminator, equivalent(s), [noun complement(s)] phrases with translations; translation doesn't always contain equivalent; discriminators functional, different in form from those in other entries, e.g. <i>przy pojęciu ruchu</i> 'with the notion of movement' (i.e. neither: 'indicating movement' nor simply: 'movement'); <i>STAN</i> 1. = <i>OED</i> 1.	separate sections (Roman numerals) for <i>up above</i> , <i>up against</i> , <i>up and down</i> , <i>up for</i> , <i>up to</i> ; counted here in their prepositional uses; SL-based; 14 senses (including 2 for <i>up and down</i> , 6 for <i>up to</i> ); 2 equivalents ( <i>tam i z powrotem</i> for <i>up and down</i> , <i>do - twice -</i> for <i>up to</i> ); 52 phrases; microstructure: number, discriminator, [equivalent], phrases with translations; translation doesn't always contain equivalent; one discriminator functional; IDIOMS section	adverb, preposition, and adjective treated together; only prepositional senses counted here; SL-based; 5 senses (9. consists of phrases, including those with <i>up for</i> etc); 4 equivalents; 30 phrases; microstructure: number, [discriminator or domain label], [equivalent(s)], phrases with translations, [noun complement(s) or accompanying verb in TL or disambiguating gloss]; translation doesn't always contain equivalent

Preposition/ beginning of <i>OED</i> entry	<i>STAN</i>	<i>PWNO</i>	<i>NKFD</i>
<i>with</i>  <b>I.</b> Denoting opposition and derived notions (separation; motion towards).  <b>1. a.</b> In a position opposite to; over against	SL-based; 15 senses; 13 equivalents; 35 phrases; microstructure: number, [TL discriminator], [equivalent(s)], phrases with translations; translation doesn't always contain equivalent; discriminators of different form: the usual, long ones, as well as some shorter ones, as in <i>for, from</i> ; note at the end of 7.
